

Eurovacuum EVR Series

Roots Vacuum Pumps

Eurovacuum EVR Series

Roots Vacuum Pumps

Eurovacuum Company is offering its various products to meet industrial vacuum needs.

Eurovacuum Company is founded in 2006, with over 30 year experiences in the vacuum Industry its founders have been putting their best efforts continuously to produce high quality Roots Vacuum Pumps, with diverse range of capacity for use in the industry in diverse applications.

The figure-of-eight rotors are counter-rotating at a constant speed inside the pump housing for suction and exhaust of the gas. Two rotors are supported by two bearings and synchronized by a pair of gears, which ensure these two rotors in certain relative positions. They are near to another and to the housing without actual contacting, so lubrication is unnecessary in the working housing. The carefully balanced operating parts and high precision bevel wheels ensure the pump be operated stably and continuously under the condition of high-pressure difference. Dynamic seal part use our patent technology and high quality seals. The vibration of shaft and the shaft seals are controlled to less than 0,02mm against oil leaking. As an option a gravity valve can be installed between the suction and exhaust of the pump. The function of the gravity valve is as following, when the pressure difference between the suction and exhaust is over the weight of the valve, the valve opens automatically, which controls the pressure difference to a fixed value. This value is the allowable highest pressure difference to ensure a problem free working of the pump. The advantage is that the pump can be started at the same time as the pre-vacuum pump and will therefore have a higher pumping speed in the high pressure range. Because the roots pump has a free clearance inside and running without lubricant in the working housing there will be some back flow of gas, therefore these Roots pumps will need a pre-vacuum pump to reach the end-vacuum.

To eliminate the change of leakage over the rotating sealing, cause by wear, we have some special version Roots pumps who have a magnetic Force system.

**EVR without bypass valve
with magnetic Force**

**EVR with bypass valve
without magnetic Force**
